

HOOK LIFT

HL 20/20A LB

High Lift Capacity

- › Fabricated or billet steel high load elements for durability
- › 20 tonne lifting capacity
- › Tough and versatile
- › Both Fixed and Articulated models available

The new **HL 20** and **HL 20a** has one of the lowest pedestal heights on the market, offering better stability and a larger payload. Clever geometry, keeping the lifting hook close to the rear drive when lifting, improves lift performance and truck stability, while a lower lifting height allows for work in low clearance areas. The rugged billet steel hook is secure yet easily placed from the driver's seat.

Like all of the **West-Trans** Skip and Hook loaders, it is craftsmen built in our factory in Mulgrave (NSW), from high quality parts and materials, and ready to work hard for years.

All **West-Trans** Hook Lifts can be recognised their billet steel hook, bin rollers, bin locks, fabricated steel bin rests, and their clean solid construction, and no fuss durability. You won't find cheap cast components on these high quality machines.

Being designed and manufactured in Australia, they are, of course, built to meet or exceed all relevant Australia

Design Rules, but more importantly, they are built to handle the toughest conditions Australia can through at them. All West-Trans hook-lifts are protected with an anti-corrosion primer base coat, and 2 coats of high gloss colour.

Speak to a **West-Trans** sales professional today, or go to the website west-trans.com.au for more details.
